

Confapi al Senato su revisione sistema incentivi

Confapi, rappresentata dal consigliere Jonathan Morello Ritter e dal Direttore Affari legislativi e istituzionali, Stefania Multari, è stata audita presso l'Aula della Commissione Industria del Senato dalle Commissioni riunite Industria del Senato e Attività produttive della Camera, nell'ambito dell'esame dello schema di decreto legislativo recante revisione del sistema degli incentivi.

“Gli incentivi alle imprese – ha affermato Ritter – devono essere concepiti come strumenti capaci di generare un effetto moltiplicatore, non solo a beneficio diretto delle aziende che ne usufruiscono, ma anche dell'intero indotto che ne deriva”.

“È positivo – ha spiegato – il provvedimento volto a riordinare le 2.374 agevolazioni attualmente disponibili, con l'obiettivo di renderle più accessibili, in particolare alle piccole e medie imprese”.

Confapi esprime con chiarezza l'esigenza delle PMI industriali di operare in un contesto normativo stabile e comprensibile. Per questo Ritter ha sottolineato che “la certezza delle regole è un elemento imprescindibile per favorire gli investimenti”.

In merito alla necessità per le imprese di poter effettuare una programmazione efficace, Ritter ha aggiunto: “Un orizzonte temporale di stabilità compreso tra i 3 e i 5 anni rappresenta il minimo necessario per consentire alle imprese di pianificare e realizzare interventi strutturali. Al contrario, un continuo mutamento delle norme genera incertezza, riduce la fiducia e rischia di frenare lo sviluppo economico”.

“La piccola impresa che vorrei”: domani l’evento finale con i vincitori

Mercoledì 6 maggio alla Sala Ticozzi di Lecco si terrà l’atto conclusivo della terza edizione del concorso **“La piccola impresa che vorrei”**, l’iniziativa organizzata da Confapi Lecco Sondrio che vede protagonisti gli istituti di istruzione secondaria di secondo grado e i CFP delle province di **Lecco e Sondrio**.

Il progetto quest’anno registra **19 classi in gara**, per un totale di circa **300 studenti** che, affiancati da **19 imprenditori tutor**, hanno lavorato fianco a fianco per sviluppare un’idea d’impresa innovativa.

Mercoledì, dopo mesi di lavoro, finalmente si conosceranno i vincitori di questa edizione decretati dalla giuria composta dagli imprenditori **Guido Baggioli, Alessandro Leidi e Alice Dell’Oca**, affiancati da **Anna Masciadri** (responsabile comunicazione Confapi Lecco Sondrio) e dalla giornalista **Katia Sala**. In palio un montepremi complessivo di 9 mila euro, destinato all’acquisto di materiale didattico o al finanziamento di attività scolastiche: al **1° classificato** andranno 4.000 euro, al **2° classificato**: 3.000 euro e al **3° classificato** 2.000 euro.

Ospite d’onore della mattinata sarà **Marco Riva**, figura di spicco del motorsport internazionale ed ex dirigente del reparto corse **Yamaha**, noto per il suo lavoro al fianco di Valentino Rossi. Riva porterà ai ragazzi la sua testimonianza su cosa significhi eccellenza, gestione del team e innovazione tecnologica.

Queste le **classi partecipanti** alla terza edizione de “La

Piccola Impresa che vorrei": 3B LES – 3CLES – 3A LES Bertacchi di Lecco, 30 meccanico – 3P Meccanico dell'Istituto Fiocchi Lecco, 3A e 3B Professionale commerciale dell'Istituto Parini di Lecco, Edilizia – Grafica – Operatore elettrico dell'Istituto Clerici di Merate, 3-4-5- Indirizzo Aeronautico Istituto Volta di Lecco, 3A BATL Istituto Badoni di Lecco, 3 Costruzione Ambiente Territorio – 4 Grafici Saraceno-Romegialli di Morbegno, 4 A Sistemi informativi industriali – 4 BA amministrazione finanza marketing – 3C liceo delle scienze umane – 3A liceo scientifico dell'istituto Pinchetti di Tirano.

Queste le **aziende** che faranno da tutor alle classi: Co.El di Torre de' Busi, Deca di Monte Marenzo, Dispotech di Gordona, Froma di Valmadrera, Imsa di Lecco, La Meccanoplastica di Calolziocorte, Novastilmec di Garbagnate Monastero, Officine Piki di Valvarrone, Pozzi Albino di Colico, Pura Comunicazione di Sondrio, Rapitech di Lecco, SCT Informatica di Lecco, Sepam di Galbiate, STF di Barzago, S.T.M. di Delebio, Tecnofar di Gordona, TMC di Cesana Brianza, Torneria Automatica Alfredo Colombo di Verderio, VML di Brivio.

The Founding of YouTube A Short History

[YouTube](#) is one of the most influential platforms in modern media, but its origin story is surprisingly simple: a small team wanted an easier way to share video online. In the early 2000s, uploading and sending video files was slow, formats were inconsistent, and most websites weren't built for smooth playback. YouTube's founders focused on removing those barriers—making video sharing as easy as sending a link.

Who Founded YouTube?

YouTube was founded by three former PayPal employees: **Chad Hurley**, **Steve Chen**, and **Jawed Karim**. They combined product thinking, engineering skills, and a clear user goal: create a website where anyone could upload a video and watch it instantly in a browser.

- **Chad Hurley** – product/design focus and early CEO role
- **Steve Chen** – engineering and infrastructure
- **Jawed Karim** – engineering and early concept support

The Problem YouTube Solved

At the time, sharing video often meant emailing huge files or dealing with complicated players and downloads. YouTube made video:

1. **Uploadable** by non-experts (simple interface)
2. **Streamable** in the browser (no special setup)
3. **Sharable** through links and embedding on other sites

Early Growth and the First Video

YouTube launched publicly in 2005. One of the most famous early moments was the first uploaded video, “Me at the zoo,” featuring co-founder Jawed Karim. The clip was short and casual—exactly the kind of everyday content that proved the platform’s big idea: ordinary people could publish video without needing a studio.

Key Milestones Timeline

2005	YouTube is founded and launches	Introduced easy browser-based video sharing
------	---------------------------------	---

2005	"Me at the zoo" is uploaded	Became a symbol of user-generated video culture
2006	Google acquires YouTube	Provided resources to scale hosting and global reach

Why Google Bought YouTube

By 2006, YouTube's traffic was exploding. Video hosting is expensive—bandwidth and storage costs rise fast when millions of people watch content daily. Google's acquisition gave YouTube the infrastructure and advertising ecosystem to grow into a sustainable business.

What YouTube's Founding Changed

YouTube didn't just create a popular website; it reshaped how people learn, entertain themselves, and build careers online. Its founding helped accelerate:

- Creator-driven media and influencer culture
- How-to education and free tutorials at massive scale
- Music discovery, commentary, and global community trends

From a small startup idea to a global video powerhouse, YouTube's founding is a classic example of a simple product solving a real problem—and changing the internet in the process.

a16z generative ai

Hippocratic AI raises \$141M to staff hospitals with clinical AI agents

Story Partners with Stability AI to Empower Open-Source Innovation for Creators and Developers

Meanwhile, Kristina Dulaney, RN, PMH-C, the founder of Cherished Mom, an organization dedicated to solving maternal mental health challenges, helped to create an AI agent that's focused on helping new mothers navigate such problems with postpartum mental health assessments and depression screening. The startup was initially focused on creating generative AI chatbots to support clinicians and other healthcare professionals, but has since switched its focus to patients themselves. Its most advanced models take advantage of the latest developments in AI agents, which are a form of AI that can perform more complex tasks while working unsupervised. Despite rapid advancements in AI, creators in open-source ecosystems face significant challenges in monetizing derivative works and securing proper attribution.

Story, the global intellectual property blockchain, has announced its integration with Stability AI's state-of-the-art models to revolutionize open-source AI development. This

collaboration enables creators, developers, and artists to capture the value they contribute to the AI ecosystem by leveraging blockchain technology to ensure proper attribution, tracking, and monetization of creative works generated through AI. Andreessen Horowitz, or a16z, is investing in AI and biotech to lead the way in innovation.

Your vote of support is important to us and it helps us keep the content FREE.

In a statement, Raspberry AI said the funding would be used to accelerate its product development and add top engineering, sales and marketing talent to its team. But with U.S. companies raising and/or spending record sums on new AI infrastructure that many experts have noted depreciate rapidly (due to hardware/chip and software advancements), the question remains which vision of the future will win out in the end to become the dominant AI provider for the world. Or maybe it will always be a multiplicity of models each with a smaller market share? That's followed by more extensive evaluations and safety assessments by an extensive network of more than 6,000 nurses and 300 doctors, who will confirm that it passes all required safety tests.

Once the AI agent is up and running, the clinicians who created it will be able to claim a share of the revenue it generates from the startup's customers. Currently the technology is being used by Under Armour, MCM Worldwide, Gruppo Teddy and Li & Fung to create and iterate apparel, footwear and accessories styles. The company's existing investors Greycroft, Correlation Ventures and MVP Ventures also joined in the round, along with notable angel investors, including Gokul Rajaram and Ken Pilot. Clearly, even as he espouses a commitment to open source AI, Zuck is not convinced that DeepSeek's approach of optimizing for efficiency while leveraging far fewer GPUs than major labs is the right one for Meta, or for the future of AI.

Raspberry AI secures 24 million US dollars in funding round

Story is the world's intellectual property blockchain, transforming IP into networks that transcend mediums and platforms, unleashing global creativity and liquidity. By integrating Stability AI's advanced models, Story is taking a significant step toward building a fair and sustainable internet for creators and developers in the age of generative AI. Hippocratic AI said it's necessary to have clinicians onboard because they have, over the course of their careers, developed deep expertise in their respective fields, as well as the practical insights to help cure specific medical conditions and the clinical workflows involved.

Investing in Raspberry AI – Andreessen Horowitz

Investing in Raspberry AI.

Posted: Mon, 13 Jan 2025 08:00:00 GMT [[source](#)]

Story aims to bridge this gap by combining Stability AI's cutting-edge technology with blockchain's ability to secure digital property rights. For example, creators could register unique styles or voices as intellectual property on Story with transparent usage terms. This would enable others to train and fine-tune AI models using this IP, ensuring that all contributors in the creative chain benefit when outputs are monetized.

One click below supports our mission to provide free, deep, and relevant content.

Holger Mueller of Constellation Research Inc. said Hippocratic AI is bringing two of the leading technology trends to the healthcare industry, namely no-code or low-code software development and AI agents. The launch is a bold step forward in healthcare innovation, giving clinicians the opportunity to participate in the design of AI agents that can address various aspects of patient care. It says clinicians can create an AI agent prototype that specializes in their area of focus in less than 30 minutes, and around three to four hours to develop one that can be tested. Shah said the last nine months since the company's previous \$50 million funding round have seen it make tremendous progress. During that time, it has received its first U.S. patents, fully evaluated and verified the safety of its first AI healthcare agents, and signed contracts with 23 health systems, payers and pharma clients.

For instance, one of its AI agents is specialized in chronic care management, medication checks and post-discharge follow-up regarding specific conditions such as kidney failure and congestive heart failure. The healthcare-focused artificial intelligence startup Hippocratic AI Inc. said today it has closed on a \$141 million Series B funding round that brings its total amount raised to more than \$278 million. “This round of financing will accelerate the development and deployment of the Hippocratic generative AI-driven super staffing and continue our quest to make healthcare abundance a reality,” he promised. Raspberry AI, the generative AI platform for fashion creatives, has secured 24 million US dollars in Series A funding led by Andreessen Horowitz (a16z). Today, we’re going in-depth on blockchain innovation with Robert Roose, an entrepreneur who’s on a mission to fix today’s broken monetary system. Hippocratic AI’s early customers include Arkos Health Inc., Belong Health Inc., Cincinnati Children’s, Fraser Health Authority (Canada), GuideHealth, Honor Health, Deca Dental Management, LLC, OhioHealth, WellSpan Health and other well-known healthcare systems and hospitals.

By incorporating this wisdom into its AI agents, it’s making them safer and improving patient outcomes, it said. Crucially, any agent created using its platform will undergo extensive safety training by both the creator and Hippocratic AI’s own staff. Every clinician will have access to a dashboard to

track their AI agent's performance and use and receive feedback for further development.

All these indicate the commitment a16z has in shaping the future of technology and healthcare through strategic investments. Both platforms use Stability AI's models to bring creators' visions to life and Story's blockchain technology to enable provenance and attribution throughout the creative process. These real-world applications highlight how creators can safeguard their intellectual property while thriving in a shared creative economy. Raspberry AI offers brands and manufacturing creative teams technology solutions, which can help accelerate each stage of the fashion product development cycle to increase speed to market and profitability while reducing costs. Andreessen Horowitz, or a16z, is one of the leading AI investors and targets only innovative startups. They participated in the round that funded Anysphere on January 14, 2025, with a total sum of \$105 million for an AI coding tool known as Cursor, whose valuation has reached \$2.5 billion.

Onyxcoin (XCN) Market Trends and Ozak AI's Contribution to AI-Driven

Blockchain

In order to ensure its AI agents can do their jobs safely, Hippocratic AI says it only works with licensed clinicians to develop them, taking steps to verify their qualifications and experience first. Once clinicians have built their agents, they'll be submitted to the startup for an initial round of testing. Through the Hippocratic AI Agent App Store, healthcare organizations and hospitals will be able to access a range of specialized AI agents for different aspects of medical care.

The startup was co-founded by Chief Executive Officer and serial entrepreneur Munjal Shah and a group of physicians, hospital administrators, healthcare professionals and AI researchers from organizations including El Camino Health LLC, Johns Hopkins University, Stanford University, Microsoft Corp., Google and Nvidia Corp. PIP Labs, an initial core contributor to the Story Network, is backed by investors including a16z crypto, Endeavor, and Polychain. Co-founded by a serial entrepreneur with a \$440M exit and DeepMind's youngest PM, PIP Labs boasts a veteran founding executive team with expertise in consumer tech, generative AI, and Web3 infrastructure. The startup has also created other AI agents for tasks like pre- and post-surgery wound care, extreme heat wave preparation, home health checks, diabetes screening and

education, and many more besides. The startup said its AI Agent creators include Dr. Vanessa Dorismond MD, MA, MAS, a distinguished obstetrician and gynecologist at El Camino Women's Medical Group and Teal Health, who helped to create an AI agent that's focused on cervical cancer check-ins and enhancing patient education. According to the startup, the objective of these AI agents is to try and solve the massive shortage of trained nurses, social workers and nutritionists in the healthcare industry, both in the U.S. and globally.

TechBullion

The same day, a16z also led a Series A investment in Slingshot AI, which has raised a total of \$40 million to create a foundation model for psychology. Those investments highlight the commitment of the group to using AI to address important issues and are also focusing on how AI can improve different industries, including healthcare and consumer services. In general, a16z is committed to supporting AI innovations that could have a profound impact on society. We are thrilled to see our models used in Story's blockchain technology to ensure proper attribution and reward contributors," said Scott Trowbridge, Vice President of Stability AI. Others include Kacie Spencer, DNP, RN, the chief nursing officer at Adtalem Global Education Inc., who has more than 20 years of experience in emergency nursing and clinical education. Her AI agent is focused on patient education for the proper installation of child car seats.

It participated in an Anysphere round that had the company raising \$105 million on January 14, 2025, when it pushed the valuation up to \$2.5 billion. Beyond this, it has also released a \$500 million Biotech Ecosystem Venture Fund with Eli Lilly to place a focus on health technologies, but with the aspect of innovative applications. On the same day, they

led a Series A investment in Slingshot AI, a company that's developing advanced generative AI technology for mental health. Additionally, a16z invested in Raspberry AI to bring generative AI to the front of fashion design and production. In December 2024, they envisioned a future in which AI was used aggressively in nearly all sectors.

- The startup said its AI Agent creators include Dr. Vanessa Dorismond MD, MA, MAS, a distinguished obstetrician and gynecologist at El Camino Women's Medical Group and Teal Health, who helped to create an AI agent that's focused on cervical cancer check-ins and enhancing patient education.
- Andreessen Horowitz, or a16z, is one of the leading AI investors and targets only innovative startups.
- Hippocratic AI said it's necessary to have clinicians onboard because they have, over the course of their careers, developed deep expertise in their respective fields, as well as the practical insights to help cure specific medical conditions and the clinical workflows involved.
- It says clinicians can create an AI agent prototype that specializes in their area of focus in less than 30 minutes, and around three to four hours to develop one that can be tested.

'Cat in the Hat' Pushed 9 Months to Fall 2026 at Warner Bros

The Cat In The Hat Animated Reboot Delayed To November 2026

This season might be hot and unappealing for some, but it's a wonderful female dog name for those who bring warmth to families with their sweetness and playful nature. Many females develop a natural maternal instinct when they have puppies or when living with other pets. After exploring popular choices, unique ideas, trends, and expert tips, the final decision rests with you. Choose a name you genuinely love saying and that feels like the right fit for your new companion. Remember, the process might take time, and it's okay to try out a few options.

Can Dogs Eat Marshmallows?

This name is no doubt the perfect choice for cute dogs that have fluffy or sleek brown coats and who love to cuddly and snuggle with their owners. It's inspired by the tiny legume that can be used in various dishes and is packed with nutrition. A compact dog with a big personality can be a great recipient of this name.

Sadie is a sweet and gentle name for a dog, perfect for a furry friend who brings happiness and comfort to their owner's life. The name Lucy is classic and sweet, perfect for a friendly and playful dog. It evokes a sense of charm and warmth, making it a timeless choice. It's a suitable name for puppies that have a jolly and bright personality.

Popular Female Dog Names (Top Choices)

This name is inspired by the large, majestic animal with large antlers. It could fit giant dogs like the Bernese Mountain Dog or any male dog that has a proud and adventurous personality. It can be a great name for a dog that has been adopted from the city or an adventurous canine that loves to explore. Cirrus is a great name for dogs that are graceful and light on their feet.

{

Labrador Retriever: Ultimate Guide by Owners

|}

Coco and Maggie offer a more playful and adorable vibe, making them perfect for a pup with a fun, energetic personality. Explore our comprehensive database of over 1,000 real dog names, collected from verified Sniffspot users across the United States. Whether you're searching for popular dog names, unique puppy names, or breed-specific names, our easy-to-use filters help you find the ideal name by gender, breed, and location. From classic choices to creative modern names, start your search below to find the perfect name for your new best friend. The name Lulu has different origins and meanings, but it's often given to female dogs who are playful and sweet.

Hondo originates from the Spanish word that means "deep." It can be a great name for dogs that are always deep in thought

or have a sense of wisdom. From a traditional nursery rhyme, the name Bo Peep is a gentle and caring female shepherd. It's just right to give this name to Border Collies as they have naturally strong herding instincts. This is another name for energetic dogs who can't help but jump and skip in excitement when their owners come home. A dog named Skippy is one who greets everyone they meet with a smile. Lemon is a citrus fruit that reminds people of freshness, sunshine, and summer.

Sunny is the best dog name for companions who always bring warmth and happiness to everyone's day. It's a cheerful and cute name that represents positivity and enthusiasm. Snowball is a name for a small white dog with a soft and fluffy coat, just like freshly fallen snow. Some examples of dog breeds that have white fluffy coats include Maltese, Bichon Frise, Pomeranians, and Coton de Tulear. A name for sweet and adorable puppies who always show their affection to their owners through cuddles and wet kisses.

It could also be given to majestic dog breeds, such as the Alaskan Malamute and Great Pyrenees. This is another unique name for dogs that is perfect for those who love to munch on food, toys, treats, and any object! There are dogs that have their own unique personalities and habits and also deserve a name that stands out from the rest of the pack. If you're looking for a unique dog name for your pet, here are fifty ideas you can choose from. Some pets are sometimes called potatoes for the way they sit or lie down, making them appear to be a giant version of the vegetable. This is why Potato is a cute dog name choice for many puppies.

Simest: progetto “Visioni Made in Italy” per le aziende

Segnaliamo che Simest, in collaborazione con il Ministero degli Affari Esteri e della Cooperazione Internazionale, ha attivato “**Visioni Made in Italy**”, un concorso di docufilm rivolto alle imprese italiane con l’obiettivo di promuovere il Made in Italy sui mercati internazionali attraverso il linguaggio del cinema.

L’iniziativa prevede la realizzazione di docufilm inediti, supportati da professionisti del settore audiovisivo, e si articola in due categorie di partecipanti:

- **Imprese (non PMI):** docufilm fino a 15 minuti, budget massimo 75.000 euro – fino a 30 selezionati
- **PMI (anche appartenenti alla filiera):** docufilm fino a 5 minuti, budget massimo 25.000 euro – fino a 70 selezionate

Le opere saranno valutate da una giuria di esperti con possibili premi nelle categorie: eccellenza creativa, capacità d’innovazione, percorso d’internazionalizzazione, impatto ambientale e sociale, integrazione di filiera, coinvolgimento di giovani e donne.

I docufilm selezionati godranno inoltre di ampia visibilità: presentazione in un evento iconico di settore, distribuzione attraverso Ambasciate e Istituti Italiani di Cultura nel mondo e inserimento in una piattaforma digitale permanente.

La scadenza per la candidatura è fissata per l’8 maggio 2026. Le domande vanno inviate, corredate dall’idea di docufilm, all’indirizzo marketing@simest.it. Ulteriori dettagli sono disponibili al seguente link: <https://www.simest.it/visioni-made-in-italy>

Le aziende interessate a partecipare devono comunicarlo anche scrivendo a comunicazione@confapi.lecco.it.

Norme tecniche UNI: dal 28 aprile 2026 consultazione gratuita

In occasione della Giornata Mondiale per la Salute e la Sicurezza sul Lavoro, appena trascorsa il 28 aprile 2026, **le principali norme tecniche UNI** in materia di salute e sicurezza **diventano consultabili liberamente e gratuitamente**. In attuazione delle recenti misure previste dall'art. 10 del "Decreto Sicurezza sul lavoro" (D.L. n. 159/2025), anche su sollecitazione di CONFAPI, è stata sottoscritta una convenzione triennale tra il Ministero del Lavoro e delle Politiche Sociali, l'Inail e l'UNI con l'obiettivo di abbattere le barriere economiche all'informazione tecnica, per rafforzare concretamente la cultura della prevenzione in ogni luogo di lavoro.

Fino ad ora la consultazione delle norme tecniche (che definiscono i criteri di eccellenza per la sicurezza di macchinari, processi e DPI) non era consultabile gratuitamente. Grazie a questo accordo, il costo del servizio sarà coperto dalla finanza pubblica tramite l'Inail, permettendo la consultazione gratuita.

L'elenco delle norme consultabili comprende **tutte le norme tecniche richiamate direttamente dal Testo Unico sulla Sicurezza (D.lgs. 81/2008) e altri standard nazionali (UNI), europei (CEN) e internazionali (ISO)** di fondamentale rilevanza per la tutela della salute dei lavoratori.

Si accede alle norme attraverso il portale dell'UNI da una [pagina web collegata al sito istituzionale](#).

La pagina UNI è accessibile anche attraverso i siti web del Ministero del lavoro e delle politiche sociali e dell'Inail.

I beneficiari di questa novità sono innanzitutto i Datori di lavoro, i Responsabili e gli Addetti dei Servizi di Prevenzione e Protezione (RSPP / ASPP), i Lavoratori e i loro Rappresentanti per la sicurezza (RLS / RLST), i medici competenti, i docenti formatori, i coordinatori dei lavori nei cantieri, gli organismi paritetici e gli organismi pubblici di vigilanza.

(SN/am)

Conai: opportunità di consulenza gratuita

Il Consorzio Conai intende offrire alle **aziende utilizzatrici di imballaggi** che sono interessate un'attività di consulenza a titolo gratuito. L'obiettivo è attestare l'attualità e la correttezza delle procedure utilizzate per l'applicazione, la dichiarazione e l'esenzione del contributo ambientale (CAC), nonché identificare possibili margini di efficientamento e offrire un supporto su quesiti e dubbi delle imprese.

Per Conai è anche l'occasione per raccogliere spunti di miglioramento sulle attuali procedure consortili. Eventuali errori potranno essere rettificati, senza incorrere in sanzioni, fermi restando i contributi eventualmente dovuti e correlati interessi di mora.

La comunicazione di questa possibilità arriverà da Conai direttamente alle imprese e le manifestazioni d'interesse

dovranno pervenire all'indirizzo indicato. Saranno prese in considerazione le prime candidature pervenute.

Per il tema Conai in associazione potete sempre sentire Silvia Negri: silvia.negri@confapi.lecco.it, 0341282822.

(SN/am)

Webinar Conai: PPWR e Green Claims

Si è svolto la scorsa settimana, in modalità webinar, un incontro per fare il punto sugli **sviluppi normativi europei nel settore packaging**: dal recepimento della Direttiva 825/2024 in Italia alla PPWR (Packaging and packaging Waste Regulation), per comprendere i nuovi obblighi e le prospettive per le imprese nel breve e nel lungo periodo.

Il webinar, promosso da CONAI, dal titolo **PPWR e Green Claims: aggiornamenti normativi e operativi per le imprese** si è svolto giovedì 23 aprile ed è recuperabile al link: https://www.youtube.com/watch?v=NKU8DyZ9p_Q

Durante il webinar sono stati affrontati i seguenti temi:

- **PPWR – Regolamento imballaggi e rifiuti di imballaggio:** chiarimento dei principali dubbi applicativi, con un focus sulla dichiarazione di conformità e sui primi obblighi in vigore già a partire da agosto di quest'anno.
- **Cialde e capsule di caffè:** cosa cambia a partire da agosto 2026 con la loro classificazione come "imballaggi", con indicazioni pratiche su progettazione, etichettatura e nuovi obblighi dichiarativi e

corrispettivi cac.

- Gli ultimi aggiornamenti dagli organismi europei di standardizzazione **CEN**, con particolare attenzione ai nuovi criteri e standard relativi alla **riciclabilità degli imballaggi**.
- **Etichettatura armonizzata**: presentazione della **proposta tecnica** del Joint Research Centre (JRC) sull'etichettatura armonizzata per la raccolta differenziata prevista dal nuovo Regolamento imballaggi.
- Lo stato del recepimento della Direttiva (UE) 2024/825 sulla **comunicazione green trasparente** nell'ordinamento nazionale e le implicazioni per le imprese.
- Presentazione del nuovo **tool CONAI sugli adempimenti in UE**, sviluppato per supportare le aziende nella gestione dei nuovi requisiti normativi.

(SN/am)
